Getting Connected to Eduroam through a 802.1x connection - Ubuntu 14.04 LTS

This document describes how to connect to Eduroam on Ubuntu 14.04 LTS. Before using the service, you should first sign up for your Wi-Fi Account.

For further enquiries, please write to ITSC Service Desk (https://servicedesk.itsc.cuhk.edu.hk)

1. From the top right corner, find the icon of wireless connections.

2. Click on it and select “eduroam”. It may be hidden in the "More networks" sub-menu.
3. Set up the wireless network:
   - Authentication: Protected EAP (PEAP)
   - Anonymous identity: (Empty)
   - CA certificate: (None)
   - PEAP version: Automatic
   - Inner authentication: MSCHAPv2
   - Username: your_computingid@cuhk.edu.hk
   - Password: your_partnership_password
   After that, click “Connect”.

   *You are reminded:
   . Sign up a Wi-Fi Hotspot Account
   . Your_username@cuhk.edu.hk with the password of Wi-Fi Hotspot Partnership.

4. If the following warning window appears, click ”Ignore”.

5. The connection should be established in a few seconds.
